## CPC Livestock

Today, more than 100,000 cattle are fed on our farm annually and prove the CPC program works.

**70% of cattle are purchased from sale barns across the southeast, with the other 30% being sourced locally from farms in the surrounding areas.**

CPC Commodities is helping other producers realize larger profits by providing high quality products and services we can stand behind – because they were “Proven on Our Farm!” Based on our extensive trial work, diverse ingredient inventory, and accomplished nutrition specialists, CPC has developed an array of products suited for any type of operation. Our experienced sales representatives have the resources to develop a total nutrition program that is made for your farm.

Following procurement, cattle are placed directly on the CPC feeding program featuring CPC Jumpstart and CPC Grower.

PROVEN ON OUR FARM. MADE FOR YOURS.

## Family history

CPC is rooted in a family farm in Fountain Run, Kentucky that dates back to the 1700's. In the 1970's the family started growing feeder pigs in addition to their already expanding cattle business. Further growth prompted the purchase of a small feed mill with an important job – make quality feed for the family's livestock.

**The mill has seen many changes, but over 50 years later, it is still perfecting feed for CPC cattle.**

## CPC Balancer Line

CPC Balancer Line minerals are designed to fortify on farm forages and commodities to meet the needs of growing cattle.

### KEY FEATURES:

- CPC Balancer minerals are developed as part of the superior nutritional program we demand for the 100,000 cattle fed on our farm annually
- High levels of vitamins A, D, and E
- Contains organic trace minerals, with no oxide sources, to provide a more readily available source

### PRODUCTS AVAILABLE:

CPC Co-Product Balancer  
 CPC Stocker Co-Product Balancer  
 CPC Stocker Co-Product Bal. 1200 B  
 CPC Stocker Co-Product Bal. 1200 R  
 CPC Stocker Pro  
 CPC Stocker Pro 1600R

## BEEFMAKER Mineral Line

CPC BEEFMAKER minerals are specifically formulated for forage types found in the fescue belt and provides the nutrients that grazing cattle need for overall health and performance.

### KEY FEATURES:

- Excellent source of phosphorus
- High levels of vitamins A, D and E for healthy eyesight, improved immune function, reproductive tract integrity and conception rates

### PRODUCTS AVAILABLE:

BEEFMAKER  
 BEEFMAKER Mineral IGR  
 BEEFMAKER 400,000 Vit A CinnaGar  
 BEEFMAKER Hi-Mag Mineral 400,000 Vit A  
 BEEFMAKER Hi-Mag Mineral .01% ALTOSID® IGR

## CPC Repro Line

CPC Repro minerals are specifically formulated with key ingredients designed to enhance reproductive efficiency in today's cow-calf operation.

### KEY FEATURES:

- Weatherizing process to improve water resistant properties of loose mineral
- High levels of vitamins A, D, and E
- Excellent source of phosphorus
- Highest levels of organic trace minerals to help improve the overall health and reproductive performance of your herd

### PRODUCTS AVAILABLE:

#### CPC REPRO PLUS

Repro Plus Mineral  
 Repro Plus Hi-Mag Mineral  
 Repro Plus Mineral 2800 CTC

#### CPC REPRO ADVANTAGE

Repro Advantage Mineral  
 Repro Advantage Hi-Mag Mineral

## Additive Options

### Rumensin®

Improves feed efficiency while preventing and controlling coccidiosis in grazing cattle.

### Bovatec®

Boosts feed efficiency and gain without compromising feed intake.

### Aureomycin (CTC) \*Requires VFD

Provides producers treatment against a wide range of respiratory and enteric diseases.

### ClariFly®

Cost-effective feed-through fly control

### EPNIX®

Fortified with 100 organic trace minerals that fit the specific life stage of feedlot cattle.

### Actigen®

Supports immune defense, gut microbial health, and gut function and development.

### Bio-Mos®

Designed to feed the gastrointestinal tract, maximizing performance and profitability.

### Amaferm®

Prebiotic designed to enhance digestibility.

### Cinnamon Garlic

Blend of plant extracts designed to enhance rumen efficiency, decrease methane production and shift the rumen VFA profile.

### FEB-200™

Specifically formulated to help lower risk of endophyte and reduce heat stress.

## Organic Trace Minerals

All minerals contain various levels of Alltech® Bioplex® as the source of organic zinc, cobalt, manganese, and copper and Alltech® Sel-Plex® brand Selenium Yeast as its source of organic selenium.

The Alltech Mineral Management program guarantees organic minerals that are better absorbed, stored, and utilized by the animal, and thus able to meet the higher nutrient needs of modern livestock for rapid growth, maximum reproductive performance and optimal animal health.

Organic trace minerals play a key role in:
